The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human baings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; food; human gastric lipase; HGL; cosmetic control; body weight.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for modifying a plant to CC produce an antibody or an active fragment or derivative, or a protein CC functional equivalent, in a cellular compartment comprises introducing a CC DNA sequence encoding a heavy chain immunoglobulin, where the DNA is CC linked to promoters and provided with an additional sequence encoding a compartment. The method is used for producing a heavy chain to a cellular CC compartment. The method is used for producing a heavy chain to a cellular CC immunoglobulin or an active fragment or derivative, or a protein that is CC immunoglobulin or an active fragment or derivative, or a protein that is CC immunoglobulin or an aplant for increasing the pathogen resistance in a plant CC or to modulate metabolism in a plant. Under some circumstances it may be CC desirable to retain the antibody product with the plant rather than CC extracting and isolating the product. In particular, edible selected CC antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The CC present sequence is an anti-potato SBEII antibody (denoted Clone46) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human baings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #19 from llama (camelid) species

                                                                                                                                                                                                                                                                                                                                The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #12 from llama (camelid) species

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #11 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                             CT The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein CC functional equivalent, in a cellular compartment comprises introducing a CC DNA sequence encoding a heavy chain immunoglobulin, where the DNA is CC piptide capable of targeting heavy chain immunoglobulin to a cellular CC compartment. The method is used for producing a heavy chain to a cellular CC compartment. The method is used for producing a heavy chain to a cellular CC immunoglobulin or an active fragment or derivative, or a protein that is CC immunoglobulin or an active fragment or derivative, or a protein that is CC immunoglobulin or an active fragment or derivative, or a protein that is CC desirable to retain the antibody product with the plant rather than CC desirable to retain the antibody product with the plant rather than CC extracting and isolating the product. In particular, edible selected CC present may be used in a method of passively immunising an animal, correspond to the product of passively immunising an animal, against the antigen, e.g., pathogenic organisms. The CC present sequence is an anti-potato SBEII antibody (denoted Clone68) heavy C chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A

The invention describes a protein array (I) comprising a number of heavy-cc chain variable domain antibodies or antibody fragments, obtainable from CC camelidae. The method is useful for removing abundant proteins from an CC extract or sample which do not provide useful information on the CC condition of a cell or tissue in the extract or sample to be condition of a cell or tissue in the extract or sample to be condition in a sample, comparing the distribution of proteins in different CC cill types, and identification of proteins that may be of importance in CC determining the altered properties of cells in disease, aging or other conditions. Using a heavy-chain variable domain derived from an CC immunoglobulin that is naturally devoid of light chains (VHH) in (I) cprovides a number of advantages, such as an improvement of consistivity/resolution in the order of 10-100 times, and detection of consistivity/resolution in the order of 10-100 times, and detection of consistivity/resolution in the order of 10-100 times, and describes a method (II) that enables the simultaneous processing of large numbers of target antigens in a controlled way. The incorporated phage ELISA companing condition. This feature combined with the microtiter plate format allows the complete automation of the technology, based on computer-made decisions on the values of the phage-ELISA for continuation of a limited conditions can be tested, varying amounts of input-phages can be used conditions on the values of the phage-ELISA for continuation of a limited condition and immunoglobulin (IgC) heavy chain variable domain variable domain in frames naeded for the generation of large panels of antibodies in short time frames naeded for the generation of large panels of antibodies in short continuation of antibodies in short continuation of antibodies in short time frames naeded for the generation of large panels of antibodies in short continuation of antibodies in short continuation of antibodies in short continuation of antibodies in short contin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Š
                                        chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #4 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                             New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
